Natural Resources in a Planetary Perspective	129
Abstract	129
1. Introduction	131
1.1 The Authors	131
1.1.1 Harald-Growing up in Norway	131
1.1.2 Harald-Becoming a researcher	133
1.1.3 Harald – On to business.....	140
1.1.4 Harald – Back to the grand cause.....	141
1.1.5 Vala – the formative years	141
1.1.6 Vala’s early career in industry	141
1.1.7 A wakeup call	142
1.1.8 The importance of resources	143
1.1.9 A new community.....	144
1.1.10 Science policy interface.....	144
1.1.11 A new story is needed	145

1.2	Natural Resources in a Planetary Perspective	145
1.2.1	Introduction	145
1.2.2	Scope	146
1.2.3	Cassandra’s prophecies – All the early warnings not heeded	151
1.2.4	Malthus	151
1.2.5	Hubbert’s Peak Oil	151
1.2.6	Limits to Growth – We have followed the standard run	152
1.2.7	New Scientist and Nature Geoscience	155
1.3	Historical Perspectives on Natural Resource Use	155
1.3.1	The beginning of metals	155
1.3.2	The beginning of fossil fuels	157
1.3.3	The issue of what is long-term and what is sustainable	158
1.3.4	Future generations, time aspects and what constitutes a proper time horizon	159
1.3.5	On technology	160
1.4	More on Sustainability and What It Means	160
1.4.1	Environmental limits and sustainability	160
2.	Classification of Natural Resources	172
2.1	Introduction	172
2.2	Sunlight, Air and Water	174
2.3	Soil	174
2.4	Metals	176
2.4.1	The big six	176
2.4.2	Precious metals	185
2.4.3	Other metals	186
2.5	Phosphorus	189
2.6	Fossil Fuels	190
2.6.1	Coal	190
2.6.2	Oil and natural gas	191
2.7	Sand, Gravel and Rocks	192
2.8	Mining Meteorites and Other Planets	192
3.	Assessment Methods	193
3.1	World Resource Use	193
3.2	Efficiency versus Resilience	197
3.3	Quantitative Methods	197
3.4	System Dynamic Modelling	201
3.5	Scarcity of Resources	202

4.	The Global Capacity for Supply	207
4.1	Metals	207
4.1.1	Iron	213
4.1.2	Theory and definitions	215
4.1.3	Iron extractable amounts, known and unknown	215
4.1.4	Iron stocks in society and supply	217
4.1.5	The IRON model	218
4.1.6	Results for iron	224
4.1.7	Field testing the IRON model	228
4.1.8	Discussion	230
4.1.9	Conclusions for iron	232
4.1.10	Nickel, Manganese, Chromium, Cobalt, Vanadium, Niobium and Molybdenum	233
4.2	Aluminium	237
4.2.1	Energy use required for aluminium production	239
4.2.2	Remaining aluminium extractable amounts and scarcity mitigation	241
4.3	Copper and Zinc	242
4.3.1	Copper	242
4.3.2	Zinc	248
4.4	Silver	248
4.5	The Story of Gold	251
4.5.1	The physical gold resource situation	253
4.5.2	Gold methods and definitions	257
4.5.3	Gold results and assessments	260
4.5.4	Discussions about gold	261
4.5.5	Conclusions for gold	261
4.6	Platinum Group Metals	262
4.7	Indium, Germanium, Tantalum, Tungsten, Lead and Tin	264
4.7.1	Indium	265
4.7.2	Germanium	265
4.7.3	Tantalum	265
4.7.4	Tungsten	266
4.7.5	Lead	266
4.7.6	Tin	267
4.8	Decoupling, Efficiency and Material Flow Volume Reduction	267
4.9	Conclusions for All Metals	277
5.	Phosphorus: The Story of How Rocks, Soil and Oil Create People	278
5.1	Introduction	278
5.2	Scope and Intent for the Analysis of Phosphorus	279
5.3	Methods	281
5.4	Model Description	283
5.5	Recycling of Phosphorus	287
5.6	Input Data to the Systems Dynamics Model	287

5.7	Results for Phosphorus	290
5.7.1	The standardised basic run	290
5.7.2	Investigating scenarios	291
5.7.3	Recycling and population	292
5.7.4	Discussion	292
6.	Energy	294
6.1	Fossil Fuels	294
6.2	Alternative Energy Sources	301
6.3	New Potentials for Energy Production	305
7.	Linking Resources and Wealth	308
7.1	Historical Perspectives – the Roman Empire as an Example.	308
7.2	The World Model	313
7.2.1	Peak world and the end of the golden age	315
7.3	Food for Thought – The Story of Helium	316
	References	318
	Index	336
