

CONTENTS

Preface	V
Future Global Mineral Resources	1
Abstract	1
1. Metals and Minerals, now and in the Future	3
1.1 Introduction	3
1.2 Is Recycling the Answer?	3
1.3 Reserves, Ore Reserves, Resources and Mineral Resources: Definitions Matter	6
1.4 The Dynamic Nature of Reserves	10
1.5 Why Do We Focus on Cu?	13
1.6 Conclusion	17
2. Formation of Mineral Deposits	18
2.1 What is an Ore Deposit?	18
2.2 Ore Grades and Ore Minerals	19
2.3 Classification of Ore Deposits	24
2.4 Orthomagmatic Ore Deposits	32
2.5 Hydrothermal Ore Deposits	36

2.5.1	Hydrothermal deposits in intrusive-volcanic environments	37
2.5.2	Hydrothermal deposits hosted by sedimentary rocks	41
2.5.3	Hydrothermal deposits in metamorphic environments	44
2.6	Sedimentary Ore Deposits	44
2.6.1	Banded iron formations and iron ore deposits	44
2.6.2	Placer deposits	45
2.7	Ore Deposits Produced by Weathering	46
2.8	Global Controls on the Distribution of Ore Deposits	47
2.8.1	Ore deposits and Earth evolution	47
2.8.2	Metallogenic provinces	49
2.9	Future Resources – New Types and New Locations of Ore Deposits	50
3.	Mineral Exploration: Discovering and Defining Ore Bodies	52
3.1	Introduction	52
3.1.1	Purpose of this section	52
3.1.2	Exploration objective	53
3.1.3	Discovery target	54
3.2	Exploration Techniques	55
3.2.1	Principal search methods	55
3.2.2	Geology	56
3.2.3	Geochemistry	58
3.2.4	Geophysics	60
3.2.5	Drilling	62
3.3	Exploration Process	64
3.3.1	Regional exploration	64
3.3.2	Prospect exploration	65
3.3.3	Drilling for discovery	65
3.4	Discovery Assessment	66
3.4.1	Resource delineation and definition	66
3.4.2	Resource estimation	67
3.4.3	Mining studies	69
3.5	Discovery Strategy and Success	71
3.5.1	Major versus junior company exploration	71
3.5.2	Strategy and tactics	72
3.5.3	Chance of success	77
3.5.4	Risk	78
3.5.5	Mining method	79
3.5.6	Social considerations	79
3.6	Exploration Budget	80
3.6.1	Economic decisions in exploration	80
3.6.2	Discovery cost	82
3.6.3	Discovery challenges – why discovery is rarely achieved	82
3.7	Future for Discovery	83

4.	Exploiting Mineral Deposits	86
4.1	Introduction	86
4.2	Historical Background	88
4.2.1	Ancient mining to the Industrial Revolution – 40,000 BP to ~200 BP	89
4.2.2	Industrial revolutions 1760-1910	92
4.3	Mining – the Past 150 Years	93
4.3.1	Bulk surface mining	95
4.3.2	Concentrates – froth flotation	95
4.3.3	Metallurgy and new materials	96
4.3.4	Hydrometallurgy – heap leaching, solvent extraction and electrowinning.	98
4.3.5	Digital technology, automation and scale	100
4.3.6	Health, safety and the environment	101
4.4	Modern Mining and Processing Methods – Importance of Deposit Types	102
4.5	Copper Deposits, Mining and Processing	107
4.5.1	Porphyry – Cu ± Mo, Au	108
4.5.2	Supergene oxide and sulphide-enriched porphyry Cu	110
4.5.3	Sediment-hosted – Cu ± Ag, Co	111
4.5.4	Volcanogenic massive sulphide (VMS) – Cu ± Zn, Pb, Au, Ag	111
4.5.5	Iron oxide Cu-gold (IOCG) – Cu-Au ± U, REEs	112
4.5.6	Magmatic Cu-Ni ± PGEs	112
4.6	Current Issues and Challenges	112
4.6.1	Jurisdictional issues	113
4.6.2	Community issues.	114
4.6.3	Environmental issues	115
4.6.4	New materials, substitution and recycling.	115
4.7	Future Developments in Mining and Processing – Implications for Resources.	116
5.	Estimating Ultimate Resources	122
5.1	Estimating Global Mineral Resources	122
5.1.1	Production-based estimates.	122
5.1.2	Peak Cu?	125
5.2	Geology-Based Methods	127
5.3	Extending Geologic Estimates	129
5.3.1	Deposit-model based estimates	129
5.3.2	Distribution of copper in the crust – The role of low-grade, anomalous, mineralised rock	130
5.3.3	Mineralogical setting of copper in low-grade, mineralised rocks	135
5.3.4	Estimating the global low-grade mineralised rock resource for copper	136

5.4 Conclusions137

5.5 Looking Ahead – Challenges for Geoscientists
Who Will Supply Resources for Future Generations 138
